

Put fresh life into your greens

If your greens are slowly filling up with Poa Annua, when really you are wanting to increase the percentage of bent and fescue in them, here's the easy way to do it. Simply Dyna-Seed them.

Overseeding is like a blood transfusion that puts fresh vigorous new growth into your turf. The problem that greenkeepers usually face with overseeding is that their members object to the disruption, so they have to wait till too late in the year when the warmth has gone out of the soil, and then they don't get proper germination. This is a huge waste of expensive seed.

The new Dyna-Seeder units open up a totally different opportunity. Because they fit so discreetly on your triple mower, your members won't even notice what you are doing, thus letting you do it when the soil is warm. Their super precise mechanism can plant pure bent seed at just 5g per metre, accurately and without wind drift.

Special trolleys store the Dynamics units when not in use, and enable them to be fitted to the mower with ease.

How the revolutionary Dyna-Seeder works...

The vibra-spiker mechanism vibrates the spikes into the ground which produces thousands of clean open holes for the seed to lodge and germinate in.

At the same time the seed is precisely metered out onto the green at the most economical application rate and pushed into the ground by the rotating spikes as they penetrate.

The precision seeding mechanism has a wide range of pre-set application rates which will handle bent seeds, fescue seeds and mixtures. Even pure bent can now be accurately and economically sown, without wind drift.

Enjoy the excellent germination rate, and fresh dense growth on your greens!

***“Fescue seeds clearly in the
holes made – saved about 2/3
normal amount of seed”***

***“80% germination of Bent seed
after 2 weeks”***
